The flow diagram of the STP at Baltal is enclosed as **Annexure B**. The Sewage Treatment Plant was set up to treat the sewage to achieve the prescribed standards of treated water in terms of BOD levels. The Sewage Treatment Plant at Baltal is based on the following four step-wise treatment processes:
    - Primary Treatment at site (i.e. in toilets) to enhance the microbial decomposition process. This should be accomplished by suitably dozing microbial consortium directly in the Toilet pits.
    - The Secondary Treatment is carried out in baffle reactors/ PVC tanks to reduce the organic load. This is done to accelerate sedimentation, microbial decomposition and digestion through rapid flocculation.
    - Tertiary treatment and filtration through reed-beds/filter media to reduce the nitrate/ phosphate content and, besides, reduce BOD level, through nutrient absorption through reeds.
    - Final treatment in oxidation ponds to achieve the prescribed standards of treated water in terms of BOD level.

The sewage has to be treated so as to completely remove the bad odour, and treat the discharge to the extent that the treated water is within the permissible statutory limits of toxicity and BOD. Monitoring and evaluation of Sanitation and Sewage Treatment at all Camps shall be done by the Shri Amarnathji Shrine Board.

The selected Agency (hereinafter referred to as Contractor) will be responsible for collection of garbage/ solid waste and its transportation to the dumping sites located outside the Camps of Baltal. **The non biodegradable solid waste collected in other Camps and routes within the Scope of Work advertised will have to be brought down to the Base Camp Baltal for further disposal** at the designated dumping sites.
